

Framing and Macro-interactions.

PROBLEM FRAMING	KEY ASSUMPTIONS	DESIGN PRINCIPLES	WHAT "GOOD" LOOKS LIKE
— Prompt-only search is vague; filter-only search is tedious. — Recruiters don't know what belongs where — and the two often conflict. — Geography is hierarchical, not a free-text field. — "Why this candidate?" has to be answered on the card, not in a modal.	— Recruiters work on desktop, keyboard-first, all day. — The prompt extractor is imperfect — every inferred attribute is editable. — One mental model: prompt = intent, filters = rules. Filters always win. — List + detail is enough. No maps, no charts.	— One applied state. One source of truth, always visible. — Provenance. Every chip shows where it came from (prompt vs. you). — Conflicts are respectful. We surface, you decide. Never silently override. — Iteration over correction. Loosen, tighten, relax — in one click.	— A recruiter pastes a prompt and lands on a tight result set in under 10 seconds. — They can scan what's applied without scrolling or hunting. — When something's off, the UI tells them why — before they ask. — Zero results never feels like a dead end.

Prototype of Microinteractions

Two ways in — watch or explore

01 · VIDEO WALKTHROUGH

Watch the full interaction demo

Prompt entry → results → edit in place

02 · LIVE PROTOTYPE

Try it yourself

Click, type, filter — fully interactive. But remember! It's a fake demo with fake data. It's just an idea.

An empty page that knows where you left off.

Looking for a senior backend engineer with strong Python experience in Berlin for an AI-native startup ; open to EU-remote . |

Search →

+ WE EXTRACTED 6 THINGS — CONFIRM OR EDIT

◆ TITLE Senior Backend Engineer

◆ SKILL Python

◆ CITY Berlin, DE

◆ INDUSTRY AI / ML startups

◆ WORK PREF Remote (EU)

◆ INFERRED · LOW CONF. Seniority: 6+ yrs

Confirm all

Dismiss extracted

Tip — anything wrong? Click a chip to edit, or [add a filter the prompt didn't catch](#).

Highlights mirror the chips — recruiters see what we caught inside their own words.

Low-confidence inferences are dashed + flagged — never silently applied.

STEP 1

Type. Anything goes — sentence, bullets, paste-from-email.

STEP 2

Confirm. Each extracted attribute becomes an editable, removable chip.

STEP 3

Iterate. Tighten or relax from the chip bar — the prompt stays untouched.

03 · Prompt entry · variant A — prompt-led

One scannable line. Every chip knows its source.
